                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human kinesin motor protein (KinI-3), with microtubule depolymerisation activity, and the polynuclectide encoding it. The novel KinI-3 motor protein can be used to prepare compositions for the diagnosis, prevention or treatment of cellular proliferation disorders, cancers, hyperplasias, restensis, vascular malfunctions, abnormal wound healing, cardiac hypertrophy, inflammatory and immune disorders (such as rheumatoid arthritis, gout, psoriasis and diabetic retinopathy) neurological disorders and disorders of vesicular transport. This sequence represents a human KinI-3 polypeptide fragment with

The novel KinI-3 motor protein can be used to prepare compositions for the diagnosis, prevention or treatment of cellular proliferation disorders, cancers, hyperplasias, restenosis, vascular malfunctions, abnormal wound healing, cardiac hypertrophy, inflammatory and immune disorders (such as rheumatoid arthritis, gout, psoriasis and diabetic retinopathy) neurological disorders and disorders of vesicular transport. This sequence represents a human KinI-3 polypeptide fragment with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for identifying a modulator of microtubule (MT) depolymerisation by contacting a polymerised MT with an MT severing or depolymerisation by contacting a polymerised MT with an MT severing or depolymerising protein and a candidate agent in the presence of ATP or GTP, and detecting formation of tubulin monomers, dimmers or oligomers. The method is useful to detect agents that regulate the cytoskeleton and the cell cycle. Such agents have potential for use as anti-mitotic agents. The present sequence represents the xenopus laevis kinesin central motor 1 (XKCM1), which regulates microtubule dynamics during mitotic spindle assembly. XKCM1 localises to centromers and appears to regulate the polymerisation dynamics of microtubules, and so is suitable for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      microtubule severing protein; microtubule depolymerisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying agents that modulate microtubule depolymerisation

                                                                                                                                                                                                                                                                The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease. The present sequence is a human MCAK
                                                                                                                                                                                                                                                                                                                                                                                                                                            New human MCAK (mitotic centromere-associated kinesin) protein useful in identifying agents for use in the treatment of cellular proliferation disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                   The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulat their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection,
                                                                                                                                                                                                              New human MCAK (mitotic centromere-associated kinesin) in identifying agents for use in the treatment of celluproliferation disorders -

The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders, inflammation, autolimnune disease, arthritis, graft rejection, inflammatory bowel disease. The present sequence is a human MCAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Fig 14; 44pp; English.

New human MCAK (mitotic centromere-associated kinesin) protein useful in identifying agents for use in the treatment of cellular proliferation disorders -  $\,$ 

Disclosure; Fig 16; 44pp; English.

The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease. The present sequence is human MCAK protein. Sequence 725 AA;

                                                                                                                                                                                                                                                                                                           infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the Subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB181144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not represented.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Plasmodium falciparum; antimalaria; malaria;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulate their activity. Modulators of MCAK are useful as therapeutic agents
                                                                                                                                                                                                                     New human MCAK (mitotic centromere-associated kinesin) protein useful in identifying agents for use in the treatment of cellular proliferation disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; MCAK, mitotic centromere-associated kinesin; motor domain; cellular proliferation disorder; cancer; hyperplasia; restenosis; cardiac hypertrophy; immune disorder; inflammation; autoimmune diarthritis; graft rejection; inflammatory bowel disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20-APR-1999;

The MCAK enzyme and its fragments are used in methods to identify compounds that modulat their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human MCAK (mitotic centromere-associated kinesin) protein, and its fragments that comprise a motor domain and directly or indirectly produce ADP or phosphate. The MCAK enzyme and its fragments are used in methods to identify compounds that modulat their activity. Modulators of MCAK are useful as therapeutic agents for treating cellular proliferation disorders such as cancer, hyperplasias, restences, cardiac hypertrophy, immune disorders, inflammation, autoimmune disease, arthritis, graft rejection, finflammatory bowel disease. The present sequence is a human MCAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Misc-difference

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB7037-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form specification, but was obtained in electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   588
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        444
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous

such as peripheral nervous injuries, peripheral

and

                                                                                                                                                                         atherosclerosis, diseases of the digestive system, atopic dermatitis, dermatomyositis, diabetes mellitus, glomerulonephritis, gout, Grave's disease, lupus crythematosus, multiple sclerosis, myasthenia gravis, osteoarthritis, osteoporosis, pancreatitis, polycystic kidney disease, polymyositis, scleroderma, Sjorgren's syndrome, autoimmune thyroiditis, complications of cancer, extracorporeal circulation, viral, bacterial, fungal, parasitic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KINRELP shares 97% identity with murine kinesin-related protein KIP2. The invention provides expension vectors, host cells, agonists, antibodies and antagonists, as well as methods for treating disorders associated with expression of KINRELP. KINRELP and its agonists are used to stimulate cell proliferation, and to treat a disorder associated with increased apoptosis. Antagonists treat a disorder associated with increased apoptosis. Antagonists used to treat cancer and inflammation (claimed). Particularly,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is the amino acid sequence of human kinesin-related protein (KINRELP), as deduced from a consensus cDNA sequence (see AAX06945).
KINRELP shares 97% identity with murine kinesin-related protein
                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Page 49-50;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New kinesin-related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                            peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; Haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          assays for receptor activity, arthritis and C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                        the encoded polypeptides (AAM)3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Inmune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21-JAN-2000;

                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjoinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB8144 to AAB8352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            by chromosome 2 of the human malarial parasite, Plasmodium falciparum Also described are: (1) nucleotide sequences (II) encoding (I); and (vaccines against P. falciparum infection comprising (I) or (II).

(I) and (II) are useful for the development of vaccines against P. falciparum infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, useful in the detection of infection with P. falciparum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           capable of detecting 1000 or more genes from Drosophila. The inventi useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

(ABB57737-ABB72072).

                                                                                                                                     The invention relates to an isolated WOODEN LEG (WOL) polypeptide, comprising 15 contiguous amino acids of a fully defined Arabidopsis (CC woODEN LEG protein sequence of 1057 amino acids as given in the specification, and to its encoding nucleic acid. The invention also crelates to an amino acid sequence of domains of protein, e.g., N-terminal CC region, C-terminal domain, etc; or is a naturally occurring allelic covariant of the above mentioned polypeptide sequence. Expression levels of the nucleic acid can be modified to improve the vasculature in transgenic plants and enhance the agronomic properties of such plants. Also the WOL promoter is used to drive expression of a heterologous coding sequence of trees to improve wood production. The WOL nucleic acid may be used as a molecular marker for a qualitative trait loci, e.g., longer roots or cenhanced wood production, in molecular breeding of crop plants. The nucleic acid is also useful in DNA amplification assays to identify the endogenous WOL genes, WOL mutant alleles and/or WOL expression products in cultivars as compared to wild-type plants. They can also be used as condition and in the wOL gene in cultivars and wild-type plants. The CC markers for linkage, analysis of qualitative trait loci. The WOL protein and/or antibodies can be used as diagnostic reagents in immunoassays to detect expression of the WOL gene in cultivars and wild-type plants. The construction is also uncleic acid, and its corresponding antibody are useful for improving agronomically valuable plants e.g., trees. This sequence represents a protein relating to the wooden leg (WOL) protein of

The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. The present invention describes the human testis mitotic centromere-associated kinesin NYD-YIF2 gene which has a cDNA sequence of 2334 base pairs (bp) containing an open reading frame sequence of 1815 bp from position 135 to 2156, encoding a sequence of 604 amino acids and has a Genbank number of AF33335. The present invention also describes:

(1) utilising the NYD-KIF2 gene to prepare a fusion protein;

(2) utilising the NYD-KIF2 gene to prepare and to prepare menoclonal and polyclonal antibodies; and (3) utilising the NYD-KIF2 gene in preparing a testicular specific function gene expressing chip. The expressed protein may become gene medicine for treating related disease. The present sequence represents the human testis mitotic centromere-associated kinesin NYD-YIF2 protein from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens
